

# LIFT KING PAINT STANDS

## FPS5100 Fender Paint Stand

The Lift King Fender Paint Stand is an inexpensive, simple, and well-designed stand. This stand works on fenders that have the inner lip. It is completely adjustable to angle the fender into the best position for stability, painting, and height for the painter. One key benefit compared to other stands on the market is there are no pins or clips needed to hold the fender in position. This will improve the quality of the paint job by avoiding shadows or less paint in certain areas. The paint and clear-coat will have an even thickness to avoid future flaking and chipping. This Paint Stand stores with very little space needed. When storing, pull one pin, fold the stand, and hang on a wall mount or a Lift King accessory rack. Several shops that have purchased this stand, typically buy more after using it. Our customers use this stand for many other applications such as bumpers, trim parts, mirrors, and even doors.

## LK5500 Extreme Paint Stand

The Lift King Extreme Stand is perfect for every collision, paint, and restoration shop. This stand is AMAZING and our customers rave over it. There are several features that separate this stand from others. Here are just a few of the many key benefits. When not in use, pull one pin and collapse the stand to hang on a wall mount. Takes the place of several stands with its multiple use design. Completely adjustable to fit all types of panels. Telescopic height adjustment to best fit the desired height for the painter. Adjust the panel to a vertical or horizontal position and all other positions in between. Complete 360 rotation of the panel with locking positions every inch. The Extreme Stand is a great choice when painting hoods, fenders, bumpers, doors, liftgates, deck lids, and other panels.

## PS6300 Easy Panel Paint Stand

The Lift King Panel Stand is designed as a universal paint stand for use in and out of the paint booth. It is built much heavier than most and built for stability and durability.

The Panel Stand is a great choice when painting all types of autobody panels including hoods, fenders, bumpers, doors, liftgates, deck lids, and other panels.

The four swivel brake casters make moving panels around the shop easy when on the Panel stand.

## LK5570 & LK5570P Deluxe Paint Stand & Plus

The Lift King Deluxe Paint Stand Plus is designed as a universal paint stand for use in and out of the paint booth. It is built much heavier than most on the market. This stand was designed for stability and durability. The height is adjustable from 5' to 7'. It comes with four heavy duty panel hooks that slide from side to side, telescopic, and can be flipped over or turned on an angle for the best hooking point. It has four swivel brake casters for easy moving and securing into position.

Plus: The difference between the Deluxe Paint Stand and the Deluxe Paint Stand Plus has an additional center bar feature and four additional heavy duty panel hooks. The center bar can be installed or removed in seconds by removing two snapper pins. The center bar with the four additional heavy duty panel hooks allows a technician to secure parts or panels from all angles as well as hang more items. This is a great universal paint stand for trim parts, hoods, doors, fenders, bumpers, lift gates, tail gates, and several other panels.
